

SELECTAMARK[®]

Makes your valuables worthless to a thief...

Simple, economical, permanent visual marking system, ideal for a wide range of assets made of a large variety of materials

Selectamark is the world's leading security marking company. The Selectamark system enables individuals and companies to permanently and visibly mark their property by postcoding and/or unique numbering. This conforms to the recommendations laid down by the Home Office. Property marking is also the key to the successful Operation Bumblebee national police campaign.

The Selectamark property marking system, used since 1986, has marked many millions of items. The system is patented and is distributed worldwide. This, our latest brochure, details our traditional and new systems together with additional products available.

Our business has grown over the years because we pride ourselves on top quality products, excellent customer service and exceptional value.

We are sure you will be totally satisfied, but would always welcome your comments. Selectamark is an **ISO 9001:2000** quality assured company, is listed as a preferred supplier under the NHS Framework Contract for Security Products, has the **LPS 1225** standard and a **'Secured By Design'** licence.

The permanent solution in visual security marking

Every year, theft costs British industry millions of pounds. Permanent security marking is a simple, low cost and highly effective way to deter the thief. There is no doubt that permanently marked property is of little interest to thieves and is virtually impossible to sell. In the event that marked equipment is stolen or even lost, it is easily identified and there is a very good chance of recovery. Selectamark is ideal for most types of office equipment and is used to identify motor vehicles, motorcycles, caravans, bicycles, marine craft and domestic electrical appliances.

Exceptional value

Just pause for a moment and think (if you dare) how much money you have invested in computers, word processors, televisions, videos and other office equipment. Then consider that it costs around a pound per item to safeguard your property with the Selectamark permanent security marking system. You can't get more cost effective than that!

LPCB Approved Database & Marking

Register your assets on our LPS 1224 approved database. This is a secure database that will hold details of each of your assets. Information can be regularly updated. An LPS database conforms to the Loss Prevention Certification Board's stringent approval procedures covering security of data, database premises and staff. It also includes ISO 9001:2000 accreditation. To conform to the LPCB approval, the asset marking must contain the database telephone number and a unique asset number.

The database will hold full details of each asset, the permanently marked details, serial number, model, cost, date of purchase, etc. This system is supported by major insurers and may qualify you for preferential insurance terms.

The price includes forms to update the information held and to notify us if any of your equipment is sold. If any of your registered equipment is stolen or lost you can notify us 365 days of the year 24 hours a day and the item will be recorded as stolen. This information is then nationally available to the police.

The marking system has been independently tested and approved by the Loss Prevention Certification Board for quality of product and permanency under LPS 1225 and Selectamark has received approval for the widest range of marking products available on the market. Selectamark also holds the 'Secured By Design' licence.

To order, you require the asset identification to LPS 1225 order form or visit our website at: www.selectamark.co.uk

Ideal for a wide range of materials

We have formulated unique compounds for the marking of plastic, glass and aluminium. Your chosen chemical permeates through the holes of the stencil into the item to be marked, leaving a permanent record of ownership.

- **PLASTIC** The plastic compound is available in blue, UV orange or UV white (the latter 2 for black or dark colours) and will also mark **baked paint finish, wood, fabrics** and the underside of **leather**.
- **GLASS** Car windows can be etched with the vehicle registration number or you can mark glass in the workplace.
- **ALUMINIUM** The aluminium compound is effective on bare aluminium, anodised aluminium and aluminium alloys, but not on other metals. It is ideal for a host of industrial products (not LPS 1225 tested).

...simplicity itself

Selectamark is quick and easy to use, giving a neat, professional mark every time. Individual stencils are produced with the message of your choice on our highly advanced dot matrix punch and laser machines. The message can be on one or two lines - simply select your message using your company name, postcode, departmental name, sequential number, etc.

For the marking of Plastic

Ensuring the surface is clean:

- 1 Remove backing paper of stencil and affix to the item to be marked.
- 2 Rub down firmly.
- 3 Pierce tube and squeeze plastic compound out into a non-plastic receptacle.
- 4 Apply compound sparingly over stencil and leave for approximately 30 seconds.
- 5 Dab off excess chemical with tissue.
- 6 Peel off and discard stencil.
- 7 Dry by wiping with surgical spirit wipe.
- 8 Attach "Marked Property" warning sticker

Standard Selectamark

RECOMMENDED BY LEADING INSURANCE COMPANIES

A number of major commercial insurance companies actively recommend the Selectamark system to their policyholders - some firms even make it a condition of insurance cover. Security marking also forms part of many police and crime prevention initiatives.

To order you require a Selectamark order form or visit our website at:
www.selectamark.co.uk

Many other marking and identification products are available from Selectamark. Please ask for the following brochures:-

SUPER MARK

Combines a tamper-resistant Marked Property label which can include printed company details and barcodes for asset identification.

LOGO MARK

Your own logo or design permanently etched with a stencil.

UV PENS

Invisible marks until illuminated under a UV lamp. Marks should be renewed every year.

SELECTA DOT

Microscopic dots the size of a pin-head with a unique identity. Ideal for electrical items, jewellery, antiques and cameras, etc.

SELECTA TAG

A range of electrical identification devices.

ASSET IDENTIFICATION

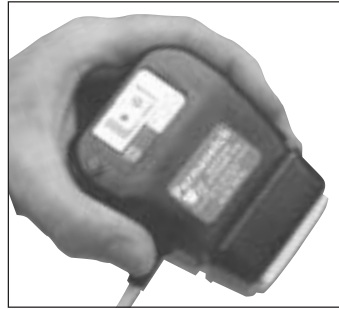

A full range of security and asset labels.

UV LAMPS AND FORGERY DETECTION EQUIPMENT

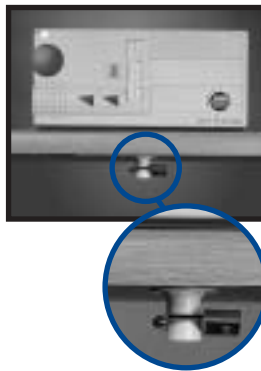

PERMANETCH

A device to electrically etch steel and metal surfaces that cannot be marked by Selectamark compounds.

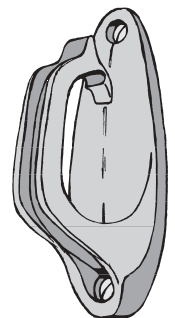

COMPUTAROOTA

The **SELECTAMARK COMPUTAROOTA** has been designed with practicality in mind. It is a cost effective lock-down that is self protected, unobtrusive and tamper-proof.

CHELSEA CLIP

A device to prevent the snatching of handbags, mobile phones and other personal possessions.
